PROSPECT

Developing Space

China has a huge demand for drying equipment every year, thousands of drying equipment or complete sets of equipment are needed for chemical, petrochemical, power generation, metallurgy, building material, environmental protection, pharmaceutical, woods, grain and food industries. It is estimated that there are thousand types of materials to be dried only in chemical and petrochemical industries every year, which demands thousand sets of drying equipment respectively per year and can realize production value of billions RMB Yuan. Our products have competitive advantage in global market because the technology has reached world advanced level while price is just two third or even half of that of foreign countries. Therefore, we are competitive both in the market of Southeast Asian countries and in that of European and American countries. We have a broad market space for further development.

Capital Operation

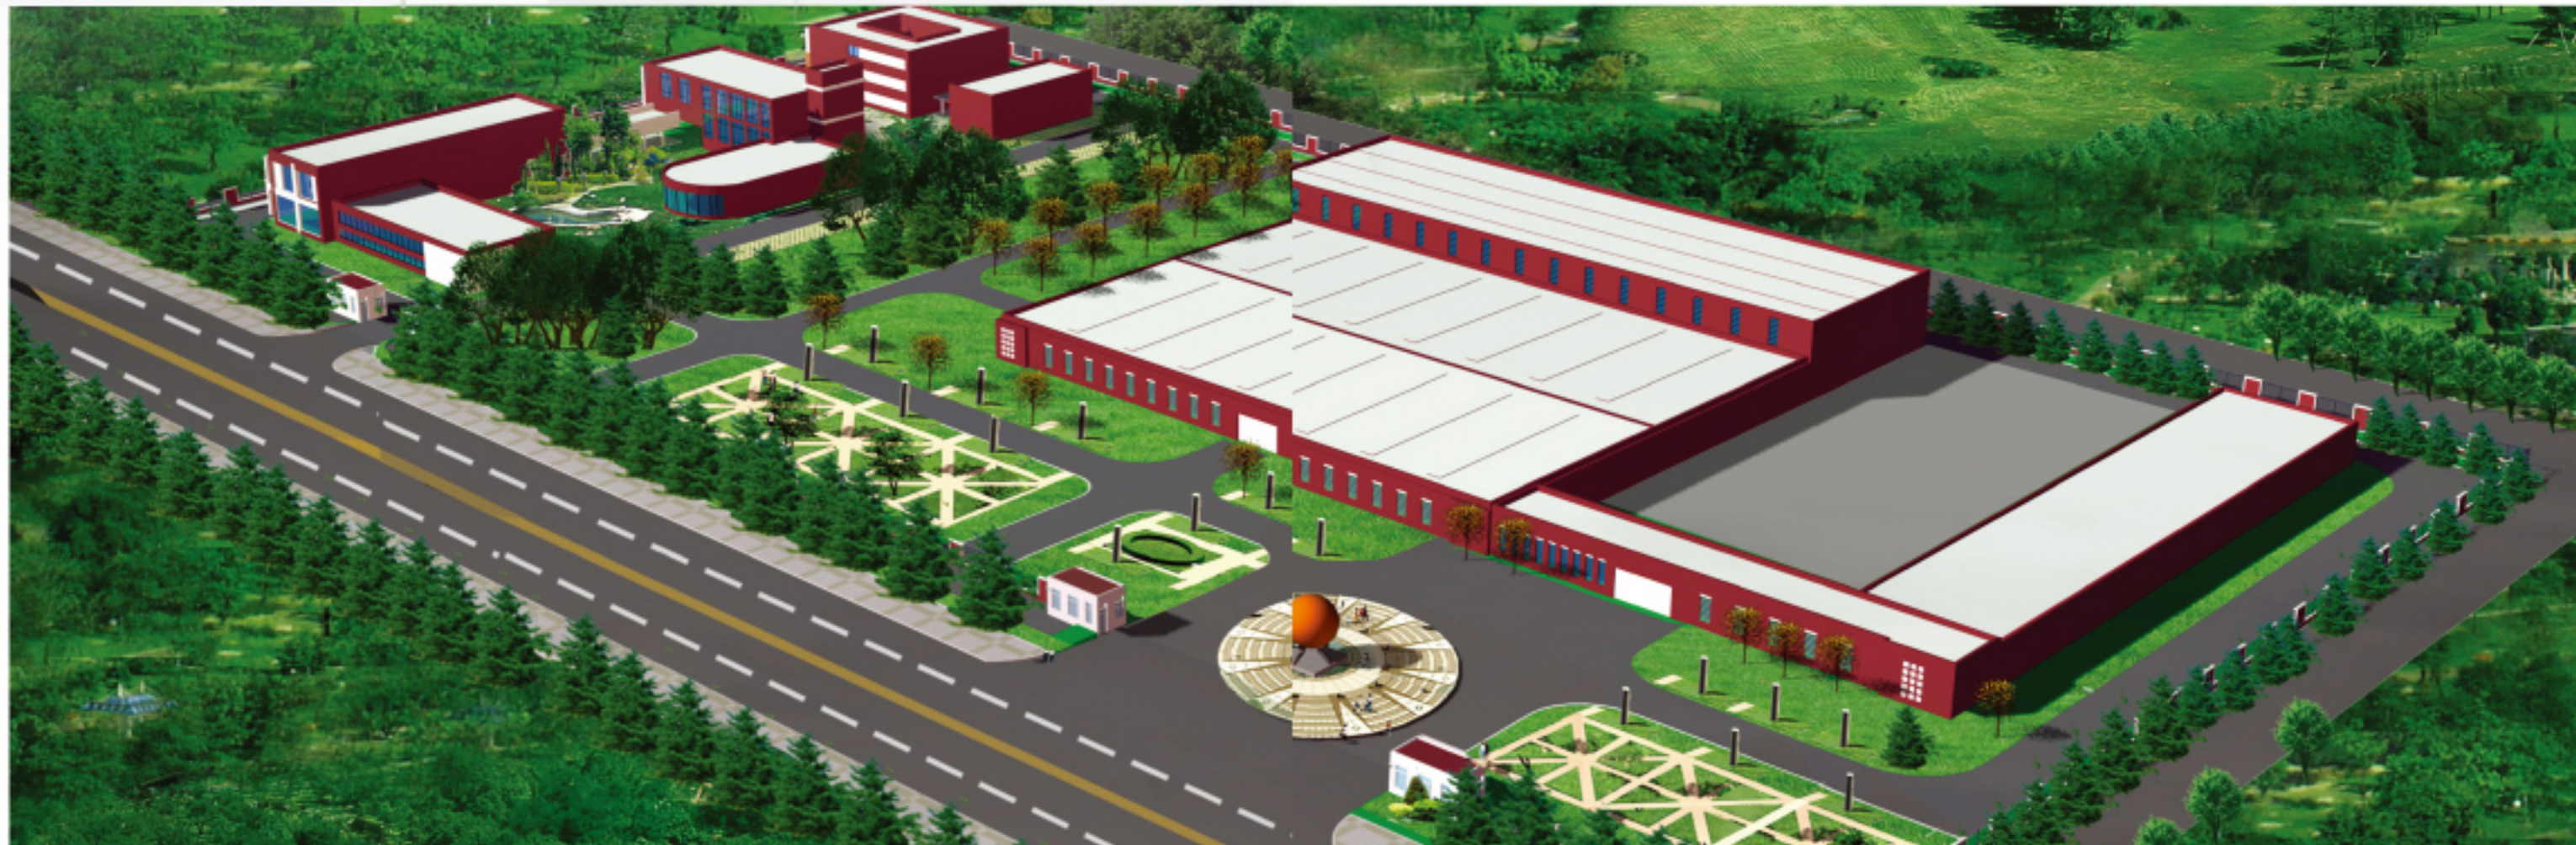

With the spread of good reputation and credibility, the company has been expanding in scale and the capital operation has gradually become company's strategic target.

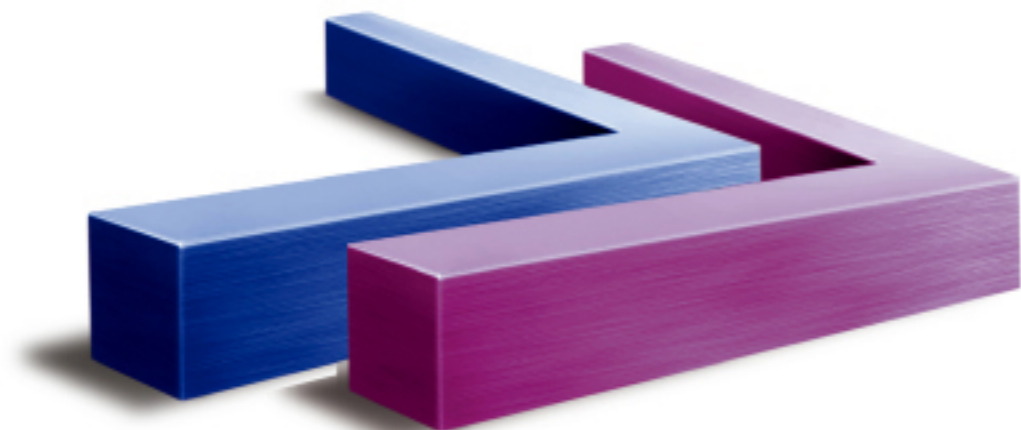

● **Enlargement of Asset Scale**

Company has established an industrial park in "Mingshui" district, Zhangqiu City, Shandong province, which enlarges the company's scale and expands the volume of its tangible assets. On the other hand, the company's patents, scientific research achievements and brand value comprise huge intangible assets. Both tangible and intangible assets will be the basis of capital operation.

● **Stock Market Listing**

Company aims to develop its core competitive edge and become one of China's influential listed companies. Its capital operation in stock market will absolutely bring new chance and space for its further and lasting development.

Outlook

Tianli people are planning their economic outlook by keeping improving their innovative ability and utilizing capital market for further development. They are making noticeable contribution to improving competitiveness of China's drying industry and nationalization of large-scale drying equipment, and playing greater role in establishing an energy-conservation society. From excellence to superiority, Tianli is leading China's drying industry forward.
